

JavaScript DOM Manipulation Cheat Sheet

Selecting Elements

- `document.getElementById("id");`
- `document.getElementsByClassName("class");`
- `document.getElementsByTagName("div");`
- `document.querySelector(".class");`
- `document.querySelectorAll("p");`

Changing Content

- `element.textContent = "Hello";`
- `element.innerText = "Hello";`
- `element.innerHTML = "Hello";`

Changing Attributes

- `element.setAttribute("src", "image.png");`
- `element.getAttribute("href");`
- `element.removeAttribute("alt");`
- `element.id = "newId";`

Changing Styles

- `element.style.color = "red";`
- `element.style.backgroundColor = "blue";`
- `element.style.fontSize = "20px";`
- `element.classList.add("active");`
- `element.classList.remove("active");`
- `element.classList.toggle("dark-mode");`
- `element.classList.contains("active");`

Creating & Adding Elements

- `let newDiv = document.createElement("div");`
- `newDiv.textContent = "Hello World";`
- `document.body.appendChild(newDiv);`
- `parentElement.insertBefore(newDiv, referenceElement);`
- `referenceElement.insertAdjacentHTML("beforebegin", "Before");`
- `referenceElement.insertAdjacentHTML("afterend", "After");`
- `referenceElement.insertAdjacentHTML("afterbegin", "First child");`
- `referenceElement.insertAdjacentHTML("beforeend", "Last child");`

Removing Elements

- `element.remove();`
- `parentElement.removeChild(childElement);`

Event Handling

- `element.onclick = function() { alert("Clicked!"); };`
- `element.addEventListener("click", function() { alert("Clicked!"); });`
- `element.addEventListener("mouseover", () => { console.log("Hovered!"); });`
- `function handler() { console.log("clicked"); }`
- `element.addEventListener("click", handler);`
- `element.removeEventListener("click", handler);`

Form & Input Values

- `document.querySelector("input").value = "Hello";`
- `let val = document.querySelector("input").value;`

Traversing the DOM

- `element.parentElement;`
- `element.children;`
- `element.firstElementChild;`
- `element.lastElementChild;`
- `element.nextElementSibling;`
- `element.previousElementSibling;`

Useful Shortcuts

- `document.body;`
- `document.head;`
- `document.title;`
- `document.URL;`
